Cayenne
Cayenne S
Cayenne Turbo

General

The interior design is also completely new and cleverly continues the exterior design in the passenger compartment. The redesigned interior with new architecture reflects the aim of achieving greater flexibility and day-to-day usability. Greater emphasis was placed on functionality, ergonomics and comfort for up to five people, resulting in a new interior design with clear contours and the consistent implementation of the cockpit concept for drivers and passengers. In the rear cabin area, the focus was placed on achieving additional space, individually adjustable seat positions and increased variability of the luggage compartment.

Main features of the interior include:

- New design with typical Porsche driver guidance and improved ergonomics
- High-quality materials
- New color range
- 6 different interior trims
- 8-way power seats (front) with memory package
- Adaptive sports seats with memory package
- Variable rear seat
- Seat ventilation (front)

Center console

The first thing that catches the eye is the elevated center console with raised gearshift, which makes the driver feel even more like an integral part of the vehicle. The gear/selector lever is also closer to the newly designed steering wheel. The most important functions and settings for vehicle operation are combined in logical groups on the center console. Individual functions can be operated quickly and intuitively by way of the buttons located on the left and right of the gear/selector lever.

Defining design elements include the reshaped handles on the center console and on all four doors.

Dashboard

When looking towards the front, the eyes of all passengers rest on the redesigned dashboard. The 7-inch display screen (6.5 inch display screen in the previous models) is located centrally, high up on the dashboard and ensures good visibility and convenient access to the large number of functions in the new Cayenne models.

Steering wheel

3-spoke steering wheels are used as standard in all Cayenne models. The 3-spoke sports steering wheel with shift paddles and the 3-spoke multifunction steering wheel are available as an option.

Steering wheel heating is available independently of the seat heating (not available for 3-spoke sports steering wheel with shift paddles).

Seat system

The seat system for the new Cayenne models has been redesigned to ensure greater comfort for all passengers. A 40 mm extension to the wheelbase and front seats that make full use of the room available create more space in the rear.

Front seats

In addition to the driver memory package, 14-way power seats with memory package are available for the driver and passengers. Adaptive sports seats with memory package (18-way) are also available as an optional extra (standard on Cayenne Turbo).

Another highlight on all Cayenne models is front seat ventilation, which is available as an option. There are three ventilation settings for both front seats. The active ventilation of the perforated seat cushion and backrest sections creates a suction air flow. The perspiration is drawn in through specially arranged air ducts and dissipated away.

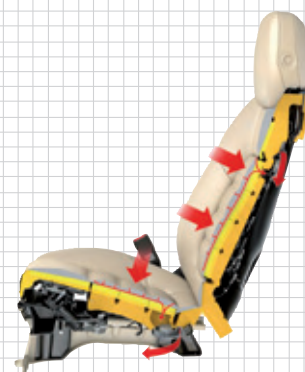

The front seat ventilation can be operated at the same time as the optional seat heating (standard for Cayenne Turbo). The front passengers can then individually adjust the seat heating to the preferred setting.

Interior body equipment

7

The seat ventilation is only available in combination with seat heating and memory package or seat heating and adaptive sport seats with memory package.

Rear bench

The standard, mechanically adjustable rear bench has drastically improved the day-to-day usability of the vehicle. The backrests on the rear bench can now be folded separately (40/20/40) as required. The central backrest assumes the function of a luggage compartment overflow into the sitting area. The rear bench (40% and 60% section) can be moved 160 mm in a longitudinal direction. Starting from the default setting, the 40% and 60% sections of the backrest can be adjusted either 3° forward or 3° backwards independently of one another.

The flexible luggage compartment cover prevents prying eyes from looking into the luggage compartment.
